

Cleanflo Drinker

DAY OLD PHEASANT CHICKS

SUITABLE FOR ALL AGES OF BIRDS

DAY OLD GREY PARTRIDGE CHICKS

Basic drinker for all chicks up to 3 weeks of age, this drinker comes with 1 metre of tube and a connecting clip ready for connection to a low pressure water line.

The water level has three settings, first -0 to 10 days, second-10days to 6 weeks, third- 6 weeks to adult.

The stand should be fitted as the birds come to 3 weeks of age with the legs set in the low position to ensure that the drinker does not become contaminated with bedding but is low enough for the chicks to drink. The water level should be set at the second setting giving an adequate water depth for the poults post biting.

As the poults grow, the legs can be extended to further reduce the risk on contamination. When the drinker is moved into an outdoor environment the legs can be fully extended. If the drinker is placed on uneven ground the legs can be adjusted to make sure the water remains level in the drinker.

For outdoor use a cover can be fitted preventing water contamination from above. The cover also reduces the risk of wild birds drinking and introducing contaminants into the drinking water.

All the separate parts clip together to make one unit which can be easily cleaned by picking up, shaking and flushing in the direction of the flush arrow marked on the top of the cover.
