MaxiCup

A semi-automatic watering system
for your Pets and Birds

The MaxiCup is a semi automatic drinker designed to use old water tanks, buckets, feed and any other type of container and turn them into reservoirs for your birds' drinking water.

The MaxiCup is a self-filling, multi use drinker that can be fitted to water containers with a water depth of up to 180cm (72")

Hardwearing for outside or indoor use
Suitable for most pet, game and wild birds
Easy to fit and use

See over for fitting and maintenance instructions.

Fitting:

Simply drill the water container with a 12mm (1/2") drill at a suitable height for your birds or pets.
Fit the MaxiCup by removing the nut & filter, place the MaxiCup spigot through the hole leaving the washer on the outside and tighten down the nut until it forms a seal with the wall of the tank - then fit the filter behind the nut. Fill with water, check angle and retighten if necessary.

Maintenance:

The MaxiCup is simple to maintain, simply undo the two screws securing the cup to the filter cover, separate the two halves and then clean the float and interior of the housing then reassemble.
